

## PBHF Fitting Database - ISDS REGISTERED DOGS

\*\*\*\*\* IMPORTANT \*\*\*\*\*

This database contains those dogs not KC registered but registered with the ISDS  
 Information on the databases below is provided to the PBHF by the owners  
 and/or breeders of the dogs mentioned and is made available here in good faith  
 to assist people in making informed choices. Any errors or updates should be  
 reported to the officers or webmaster. The PBHF is not responsible for the  
 content of external sites.

| twice daily bromide 550mg daily lamme twice daily. Fed on Arden Grange Lamb & Rice when fits started, after fits controlled changed to CSJ when had more fits these reduced when back on Arden Grange. Fits initially controlled on Phenobarb. More frequent fits 1 year later bromide added more fits 6 months later & bromide increased. There seems a stress component as she increased in fitting frequency when owner had serious illness attacks. Also worse when returned to sheep work. Spayed after fitting started - no effect. |   | Phenobarb 60mg                                | Arden Grange Lamb & Rice when fits started, after fits controlled changed to CSJ when had more fits these reduced when back on Arden Grange |

| <p>as he was approaching his 4th birthday. He had one fit in the early hours of the morning, checks were done at local vets and they couldn't agree what had caused it, a week later another fit followed by his body starting to shut down, laboured breathing and no energy. taken to Potters Bar vets hospital, kept in for a week, one small fit whilst he was there, they said sudden onset epilepsy, bought him home as they said he might not fit again. He had been home from Potters Bar for 2 weeks with no fits, then had a major fit in his crate whilst we were out and died after choking on his own vomit. Roughly 8 weeks after his first fit.</p> |  | none                       |                             |

Two fits May 2012. None until Aug 2012 when cluster of 7 fits in one evening, started Epilepsy treatment. 3 weeks later, symptoms of Meningitis & treated with steroids as well. Health & quality of life seemed to deteriorate. Epilepsy treatment reduced from 120 mg, Pheno to 30mg per day. After no further fits Pheno withdrawn by Vet & steroids gradually reduced. Third bad dose of worms = Panacur for 7 days. B12 injections for 1 month. Now no fits. No medication. Appears Normal. Monitored by Vet. Dog entire. 20.07.14 Update on Blus epilepsy. Blu had cluster fits September 2013 went on pheno 60mg x 2 daily more cluster fits Jan 6 2014 (7 fits). monitored checked bloods and various other things all normal. Again cluster fits x 3 19th May 2014. Severe cluster fits wed 9th July 2014 two fits aprox 4pm then 4am - 6.30 8 fits despite x 2 valium and one rectal valium. emergency vet and further fits. Severity of fits and amount far exceeded previous. Required anaesthesia x 2 and admission for two days to stop fitting. Pheno now increased to 120mg x twice a day and potassium bromide added x 2 daily. Also how can I help with dna ?

Pheno now increased to 120mg x twice a day and potassium bromide added x 2 daily.

| <p>Fitting began approx 1 year old. Vet confirmed as Epilepsy. Full health check and blood tests were done firstly. Bloods came back normal. Meds started in 2008: 60mgs Epiphen twice daily-then later 30mgs twice daily. Was reduced to 45 mgs once a day. Meds currently 400 mgs Pexion. Started with Focal seizures then progressed losing control of the back end and collapsing then in to fitting. Vet diagnosed Idiopathic Epilepsy. Since being on Pexion things have settled. Update. Shyla has been doing well. Last bad episode was last year. Things looking up and meds have been reduced. Latest script (28/5/2014 ) is 100mg Tablets 1 1/2 Tablets once a day. Bloods will be checked again in Sept.</p> |                                | Pexion                     |                             |

| <p>Fitting began aged 18 months old. Vet confirmed as Epilepsy. Medication: phenobarbital 90mg twice daily was started on low dose and increased over a few months. Nothing unusual happened that might have cause fitting to start. She was getting hero food changed to natural frozen meals didn't make any difference change in food didn't make any difference fits have increased over months as well since onset. Fits use to be twice every two weeks now there nearly every week and its usually a cluster of two or three one after the other but don't last as long as before. Entire but due to get spayed in September 2014 when shes stable</p> |                                  | phenobarbital 90mg twice daily |                             |

| <p>Fitting began aged 3 years 10 months. Vet confirmed as Epilepsy. Medication: He is not longer with us, however was on Phenobarbital 120 mg twice daily and Epilease (though I forget the amount) Rectal diazepam in 5mg increments every 15 mins to try to stop seizure cluster once it started. They increased over the course of 14 months. He had petit mals, they lasted about 3 mins with a recovery period that was always blurred with another fit. Would regularly have up to 50 fits over 3 or 4 hours before the levels of diazepam were high enough to stop him. He was neutered after epilepsy was diagnosed. Increase of severity and frequency went up more quickly after neutering. He had a cluster of fits that I didn't see the start of - temp went up too high, brain damage. PTS 2 days later when no sign of improvement in neuropathic damage. No known trigger for fits</p> |                                  | <p>Phenobarbital 120 mg twice daily and Epilease (though I forget the amount) Rectal diazepam in 5mg increments every 15 mins to try to stop seizure cluster once it started.</p> |                      |

|--|--|------------------|
| <p>Fits began aged 12 months. Vet. confirmed as Epilepsy. Medication: Sparrow was on or tried phenobarbitone, KBr, Keppra, Gabapentin, Zonisamide, Topiramate, skullcap and valerian. No cause found for seizure onset. Full screen (including scans) by Neurologists at AHT confirmed ideopathic epilepsy. The fits were frequent and intense from the outset - he never went more than about 3 weeks without severe cluster fits. He frequently was admitted to emergency vets and AHT to help break cluster seizures. He was unneutered as he started fitting so early and was never seizure free long enough to neuter him. Sparrow had severe refractory epilepsy for 2 years. He was put to sleep at the specialist vets as they were unable to stop him seizing. He was just 3 yrs old.</p> | <p>on or tried phenobarbitone, KBr, Keppra, Gabapentin, Zonisamide, Topiramate, skullcap and valerian.</p> |                  |

29

Fits began age 17 months. Vet confirmed as Epilepsy. 1st seizure 3rd May this year, went into status epilepticus on 21st July this year and had to be euthanased. He was 17-18 months old when he had his first seizure and died when he was almost 20 months old. Fit pattern seem to be after working but was manageable on Diazepam. Prescribed medication: Diazepam rectubes. Was fed CSJ adult champ from 10 months of age. Seizures were every 14-21 days progress ing every 10 days. As far as I am aware, no history of epliepsy in family. Only puppy in the litter to be affected.

Diazepam rectubes

CSJ adult champ from 10 months of age

Fitting began aged 2 years. Vet confirmed as Epilepsy. Medication: Bromide and Epiphen. Due to severity / frequency of fits medication increased till dog was unable to coordinate .agility became impossible couldn't jump into car, medication changed to different med cant remember what, but got normal dog for 4 weeks till massive fit ended with euthanasia. euthanised as vet suspected brain damage due to length of fit. No known triggers for fits, fed on Arden Grange.

Bromide and Epiphen

Arden Grange.

Fitting began age 2 years 8 months. Vet confirmed as Epilepsy. Medication: epiphen, libromide and was tried on pexion Was fed was on BARF, changed to chappie after a few months as was successful for other dogs in making them stable. cluster fits were intially stabilised and fit free for about 9 months, then multiple cluster fits which become worse, ending in vets being able to do no more for him and he was PTS. pts due extended periods of fitting which vets (including RVC) could do no more to stablise. Aged 4 years 12 days.

epiphen, libromide and was tried on pexion

Was fed was on BARF, changed to chappie after a few months as was successful for other dogs in making them stable. cluster fits were intially stabilised and fit free for about 9 months, then multiple cluster fits
