<p>twice daily bromide 350mg daily Taurine twice daily. Fed on Arden Grange Lamb & Rice when fits started, after fits controlled changed to CSJ when had more fits these reduced when back on Arden Grange. Fits initially controlled on Phenobarb. More frequent fits 1 year later bromide added more fits 6 months later & bromide increased. There seems a stress component as she increased in fitting frequency when owner had serious illness attacks. Also worse when returned to sheep work. Spayed after fitting started - no effect.</p>		Phenobarb 60mg	Arden Grange Lamb & Rice when fits started, after fits controlled changed to CSJ when had more fits these reduced when back on Arden Grange

Yes	Deceased	major fit in his crate whilst we were out and	
Suspect Stimulus:		Medication:	Food prior to onset:
<p>He fits started completely out of the blue just as he was approaching his 4th birthday. He had one fit in the early hours of the morning, checks were done at local vets and they couldn't agree what had caused it, a week later another fit followed by his body starting to shut down, laboured breathing and no energy. taken to Potters Bar vets hospital, kept in for a week, one small fit whilst he was there, they said sudden onset epilepsy, bought him home as they said he might not fit again. He had been home from Potters Bar for 2 weeks with no fits, then had a major fit in his crate whilst we were out and died after choking on his own vomit. Roughly 8 weeks after his first fit.</p>		none	
Neuter:	Frequency:	Comments:	
yes	He was neutered at least two years before the fits started .

Two fits May 2012. None until Aug 2012 when cluster of 7 fits in one evening, started Epilepsy treatment. 3 weeks later, symptoms of Meningitis & treated with steroids as well. Health & quality of life seemed to deteriorate. Epilepsy treatment reduced from 120 mg, Pheno to 30mg per day. After no further fits Pheno withdrawn by Vet & steroids gradually reduced. Third bad dose of worms = Panacur for 7 days. B12 injections for 1 month. Now no fits. No medication. Appears Normal. Monitored by Vet. Dog entire. 20.07.14 Update on Blus epilepsy. Blu had cluster fits September 2013 went on pheno 60mg x 2 daily more cluster fits Jan 6 2014 (7 fits). monitored checked bloods and various other things all normal. Again cluster fits x 3 19th May 2014. Severe cluster fits wed 9th July 2014 two fits aprox 4pm then 4am - 6.30 8 fits despite x 2 valium and one rectal valium. emergency vet and further fits. Severity of fits and amount far exceeded previous. Required anaesthesia x 2 and admission for two days to stop fitting. Pheno now increased to 120mg x twice a day and potassium bromide added x 2 daily. Also how can I help with dna ?

Pheno now increased to 120mg x twice a day and potassium bromide added x 2 daily.

Fitting began approx 1 year old. Vet confirmed as Epilepsy. Full health check and blood tests were done firstly. Bloods came back normal. Meds started in 2008: 60mgs Epiphen twice daily-then later 30mgs twice daily. Was reduced to 45 mgs once a day. Meds currently 400 mgs Pexion. Started with Focal seizures then progressed losing control of the back end and collapsing then in to fitting. Vet diagnosed Idiopathic Epilepsy. Since being on Pexion things have settled. Update. Shyla has been doing well. Last bad episode was last year. Things looking up and meds have been reduced. Latest script (28/5/2014) is 100mg Tablets 1 1/2 Tablets once a day. Bloods will be checked again in Sept.		Pexion

Fitting began aged 18 months old. Vet confirmed as Epilepsy. Medication: phenobarbital 90mg twice daily was started on low dose and increased over a few months. Nothing unusual happened that might have cause fitting to start. She was getting hero food changed to natural frozen meals didn't make any difference change in food didn't make any difference fits have increased over months as well since onset. Fits use to be twice every two weeks now there nearly every week and its usually a cluster of two or three one after the other but don't last as long as before. Entire but due to get spayed in September 2014 when shes stable		phenobarbital 90mg twice daily

Fitting began aged 30 months. Vet confirmed as Epilepsy. Medication: Epiphen 30mg 2x daily. Had a cluster of 4 seizures within 2 hours, immediately sedated with diazepam and put on medication. No fits since the initial cluster of 4, medication given 2x daily and fed more regularly as owner believes that fits poss. triggered by low blood sugar levels that day, but not confirmed. Neutered after first season.	Epiphen 30mg 2x dail

Fitting began aged 3 years 10 months. Vet confirmed as Epilepsy. Medication: He is not longer with us, however was on Phenobarbital 120 mg twice daily and Epilease (though I forget the amount) Rectal diazepam in 5mg increments every 15 mins to try to stop seizure cluster once it started. They increased over the course of 14 months. He had petit mals, they lasted about 3 mins with a recovery period that was always blurred with another fit. Would regularly have up to 50 fits over 3 or 4 hours before the levels of diazepam were high enough to stop him. He was neutered after epilepsy was diagnosed. Increase of severity and frequency went up more quickly after neutering. He had a cluster of fits that I didn't see the start of - temp went up too high, brain damage. PTS 2 days later when no sign of improvement in neuropathic damage. No known trigger for fits and always fed raw.		Phenobarbital 120 mg twice daily and Epilease (though I forget the amount) Rectal diazepam in 5mg increments every 15 mins to try to stop seizure cluster once it started.	
Neuter:	Frequency:	Comments:

<p>Fits began aged 12 months. Vet. confirmed as Epilepsy. Medication: Sparrow was on or tried phenobarbitone, KBr, Keppra, Gabapentin, Zonisamide, Topiramate, skullcap and valerian. No cause found for seizure onset. Full screen (including scans) by Neurologists at AHT confirmed ideopathic epilepsy. The fits were frequent and intense from the outset - he never went more than about 3 weeks without severe cluster fits. He frequently was admitted to emergency vets and AHT to help break cluster seizures. He was unneutered as he started fitting so early and was never seizure free long enough to neuter him. Sparrow had severe refractory epilepsy for 2 years. He was put to sleep at the specialist vets as they were unable to stop him seizuring. He was just 3 yrs old.</p>	<p>on or tried phenobarbitone, KBr, Keppra, Gabapentin, Zonisamide, Topiramate, skullcap and valerian.</p>

Fitting began aged 4 years. Vet confirmed as Epilepsy. Medication: 400mg Pexion/day Nothing unusual happened before fitting began. He is on fresh food, no grains, even before the fitting started. November 2013 it got worse, despite pexion. Since beginning of this year we increased medication so now frequency of fitting can be different from every 2 weeks till once in 6 or 7 weeks. Entire. [** Owner states that sire of this dog has produced 8 litters/43 puppies & dam of this dog has produced 4 litters / 27 puppies. Cannot be verified as not registered with UK KC).	400mg Pexion/day	He is on fresh food, no grains, even before the fitting started.

32 Fitting began aged 2 years. Vet confirmed as Epilepsy. Medication: Bromide and Epiphen. Due to severity / frequency of fits medication increased till dog was unable to coordinate .agility became impossible couldn't jump into car, medication changed to different med cant remember what, but got normal dog for 4 weeks till massive fit ended with euthanasia. euthanised as vet suspected brain damage due to length of fit. No known triggers for fits, fed on Arden Grange.		Bromide and Epiphen	Arden Grange.

<p>Fitting began age 3 years 11 months. Vet confirmed as Epilepsy. Medication: Pexion 550mg twice daily which have not appeared to control them and now changing over to Epiphen currently at 30mg twice daily. Fed on Omnipro lamb and rice. Fed royal canine as a pup. fits vary in frequency, never been to a regular rhythm, 3 weeks to 8.5 weeks variation. Very short fit duration around 60 secs and back to normal within 5 minutes. Urinates every time. No multiple fits. neutered before started fitting. I wondered if this had been a trigger but assured no by vets</p>		<p>550mg twice daily which have not appeared to control them and now changing over to Epiphen currently at 30mg twice daily.
